

HEAT RECOVERY

GAME-CHANGING DUYNIE GROUP INNOVATION

Production companies are constantly looking to reduce energy consumption. That's why Duynie Group is developing a revolutionary heat pump which upgrades heat to high temperatures. This enables production companies to use this heat directly in their production process reducing the need for natural gas, saving energy costs and significantly reducing the amount of CO₂ emissions.

DUYNIE GROUP INNOVATIONS

We believe that innovations can create new value. For us, our suppliers, our customers and the environment.

* The heat recovery innovation is at Technology Readiness Level 6, technology demonstration.

This project was carried out with a subsidy from the Ministry of Economic Affairs, national regulations for Economic Affairs Grants, Top Sector Energy carried out by the Netherlands Enterprise Agency.

- 

Effectively reduces the need for natural gas in the production process
Up to 70%
- 

Significantly reduces energy costs
- 

Significantly reduces the amount of CO₂ emissions

CREATING NEW VALUE
